Freestanding  
Systems Furniture

**FlexStation** is able to adapt to new surroundings in a moment's notice. With **FlexStation**, all the components are freestanding, which allows them to be moved and reshaped into new configurations.

**FlexStation** can be used in multiple station applications, private offices or individual cubicles. It's the station of the future.

Mobile teardrop and semicircle tables move around easily for impromptu meetings. Afterwards, they can be moved back to fit against the primary worksurfaces. No wasted space.

Basic curvilinear worksurfaces join 24" wide surfaces with 30" wide surfaces - clean, continuous.

**FlexStation** is the affordable solution to your ever-changing office requirements.

Paper management woes disappear with this unique workbar. Binder bins, paper trays and slanted storage attach easily and can move on the bar wherever the worker needs them to be.

Flipper door overheads open and settle on the top of the cabinet, and are available in laminate or fabric fronts.

Worksurfaces can be specified with a combination of standard and transitional legs. Transitional legs provide greater leg room and chair clearance (including wheelchairs) where two surfaces are joined.

The mobile teardrop table gives you plenty of extra workspace. It's available in a 24" x 40" diameter or 30" x 50" diameter (shown here). Two of the casters lock to keep your table in place.

Easy-to-operate leg channels route wires safely to the floor. The channels swing open for the user to effortlessly situate wires and cables.

**FlexStation** looks great on its own, but it also fits nicely with System XXI! This unit is panelwrapped with our System XXI panels and it really completes this office setup. This executive has everything he or she needs at their fingertips: ample overhead storage; workbar complete with CD holder, pencil cup, letter tray and diagonal storage; tackboard; CPU sling; adjustable keyboard tray with mouse surface; Series XXI pedestal and kiosk files. All the makings of a great office!

**FlexStation** offers an assortment of worksurface options: basic or curvilinear, corner, peninsula (basic, piano, "P" shaped, which is shown here), square shoe; conference end; as well as many transitional corner surfaces. With all this flexibility, it's easy to see why **FlexStation** is the perfect choice for your office!

Surface access ports (grommets) eliminate worksurface clutter by routing desktop wiring off the work area.

Kiosks combine a number of filing options together: lockable closet, cupboard and lateral file drawers. Some kiosks offer open shelves instead of the cupboard area.

Because **FlexStation** is freestanding, it's perfect for classroom or training areas. Basic worksurfaces are available in lengths of 30" to 72" (length sizes increase by 6" - shown here are 60" surfaces) and can be moved around according to your needs. These worksurfaces can also be specified with our exclusive PowerUp® feature - available in five different levels. The PowerUp module contains a duplex 110-volt receptacle, two data ports and a power cord with three-prong plug. It provides for two Lucent Technologies connectors. Data connectors for phones, modems, printers and networks can be incorporated into the system. For more information on PowerUp, see pages 14 and 15. With **FlexStation** and PowerUp, training room setups are a snap!

Wires and cables from worksurfaces are managed by a channel mounted behind the worksurface top. Less clutter means higher efficiency for the worker.

The T-edge brings the trim color and laminate together. Available in black, sand, warm grey, blue grey and light tone.

The plastic scuff plate protects the leg from dings and scratches.

The future is today! With **FlexStation** (wrapped in PowerWorks), you get power and data hook-up wherever you need it! Need it at the belt line? Ok. Need it to meet ADA requirements below the worksurface? That's ok too! Need it on the worksurface? We can handle that with PowerUp®. **FlexStation** and PowerWorks, as a duo, offer you the utmost in flexibility and versatility. Need even more flexibility? For users requiring worksurface height adjustment capability, **FlexStation** adjustable worksurfaces are the right choice. Single and dual-surface units are available in both in-line and corner styles in a manually adjustable version. Surfaces adjust from 23"-34" via a durable chain-driven mechanism. Single-surface in-line units are available in two depths (24" and 30") and five different shapes (single, single corner, single surface for overhead, single curvilinear and single curvilinear corner). Dual surface and dual surface corner units are also available. Manually adjustable worksurfaces are also available and feature a chain-driven mechanism that allows adjustment from 23"-34" with cranks that can be operated from either the right or left side of the worksurface. All **FlexStation** adjustable units meet BIFMA and ADA standards.

The mobile semicircle table fits snugly against two worksurfaces, providing yet another impromptu meeting area. The notch in the center allows for wire and cable management.

The CPU sling permits a CPU up to 65" circumference to be conveniently located anywhere along the underside of a worksurface - freeing up valuable worksurface area for the user.

Overhead and privacy screen design allows the worksurface unit to be flush with the wall or panel.

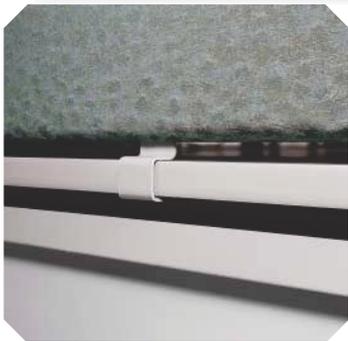

Electrically adjustable worksurfaces are available in six different styles - in both single and dual surface configurations. They move quickly from a sitting position of 26" to a standing position of 40".

Face it. Space is tight all over. You need to strategically position as many employees as possible in a limited office space. **FlexStation** to the rescue! With **FlexStation** freestanding furniture, you can arrange and rearrange furniture as necessary. Since it's freestanding, you don't need walls or panels to support the furniture. And the variety of worksurface shapes available is astounding: basic rectangular, peninsulas, round conference ends or corner basic or curvilinear. Transitional surfaces include curvilinear, square, rectangular, triangular and corner shapes. Transitional worksurface brackets allow the user to efficiently join basic worksurfaces of different heights (27" with 29"). Four different edge treatments are available: T-edge, 3mm PVC, postformed and elliptical postformed. Edge styles differ on each worksurface - check with your sales representative for current information. With **FlexStation**, it's easy to make it all fit together!

Privacy screens, which attach securely to the worksurface, can easily be removed as office needs change.

Task lights mount flush under overhead units. That means more available light for the user - and less surface clutter to deal with.

Wires from overhead task lights remain out of sight with the unique routing channel on every **FlexStation** overhead unit.

As a child, you are taught to share. Same thing applies to your work area. The emphasis today is on teamwork, and with teamwork comes sharing a work area. It doesn't have to mean small, cramped spaces - not with **FlexStation!**

Create the space you want - the size you want - with the components you want. With the many options available on **FlexStation**, you really can create your own personal space! A space that is comfortable, ergonomic and efficient. You can keep it basic with simple components or make it state-of-the-art with curvilinear worksurfaces and exclusive PowerUp® features.

Other options to add include: pullout keyboard trays or an articulating keyboard arm with sliding mouse pad - each allows your computer keyboard to be moved off the worksurface; CPU slings and security kits - another option to remove clutter from the worksurface; and a variety of task lights. Add Series XXI filing options - such as pedestal files, lateral files, vertical files and kiosks - and your personal space is complete!

**FlexStation** is constructed of heavy-gauge steels and high quality particleboard - which means long life in your office. It's the right choice for your office environment.

The articulating keyboard arm allows users to adjust tilt and height for personal preference. It stores under the worksurface when not in use. The mouse pad slides to accommodate both right-handed users and left-handed users.

The peninsula center mount attaches to two adjoining surfaces with splice plates.
